ABOUT ME

Passionate and detail-oriented 4th year Computer Science Student with a CGPA above 8.7, currently specialising in Android Development using Kotlin. Eager to contribute to real-world mobile solutions through robust coding, creative design and collaborative teamwork. Seeking opportunities to grow in Android and AI-powered mobile application development.

EDUCATION

B-TECH (CSE) (9.43) DAV University Jalandhar, Punjab	(2022-2026)
XII NON-MEDICAL (CBSE) (77.2%) Guru Nanak Mission Public School	(2021-2022)
X (CBSE) (80%) Guru Nanak Mission Public School.	(2019-2020)

SKILLS

- **Language:** Kotlin, Java
 - **Android:** Jetpack Compose, XML, ViewModel, LiveData, Hilt, Material design
 - **Backend/Integration:** Firebase, Authentication, Cloud Messaging, ROOM Database.
 - **Version control & Tools:** GitHub, Android Studio
-

PROJECTS

ELITE EVENT

- An Android application developed to manage event logistics including guest registration, vendor coordination, and budget tracking in a structured digital format.
- **Tech Stack:** Kotlin, XML, Room Database
- Implemented Room Database for efficient local data storage and designed responsive XML-based UI screens, ensuring smooth data handling and stable app performance.

TRACKIT APP (LOST AND FOUND CAMPUS APP)

- A campus-based Lost & Found management system that enables users to report items and allows admins to manage records with real-time updates.
- **Tech Stack:** Kotlin, Jetpack Compose, Firebase, Cloud Storage, MVVM, Cloudinary, OneSignal
- Integrated Firebase Authentication and real-time database, implemented image uploads and push notifications, and structured the project using MVVM architecture for scalable and maintainable code.

HELPHIVE – DONOR APP (HACKATHON PROJECT)

- A donation platform connecting donors and recipients for blood, organs, medicines, and financial support with real-time updates
- **Tech Stack:** Kotlin, XML, Firebase.
- **Role:** Developed secure user authentication, implemented real-time data synchronization, and integrated location-based services to enhance accessibility and user engagement.

EDUMARK AI

- An AI-based Android application designed to evaluate student responses using structured rubric-based assessment logic.
- **Tech Stack:** Kotlin, Jetpack Compose, Firebase.
- Designed modern Compose UI and implemented custom evaluation logic to automate grading with improved accuracy and performance.

LIBRARY MANAGEMENT APP

- A database-driven Android application built to digitize book issue and return management processes.
- Features: Added swipe-based issue/return management and real-time status sync, reducing admin efforts.
- **Tech Stack:** Kotlin, XML

EXPERIENCE

- **Freelance Android Developer-Client Project (Kotlin Multiplatform)** **Feb 2025-Mar 2025**
Co-developed a cross platform mobile application using kotlin multiplatform and Firebase
Successfully delivered app within deadline and received payment for the project.
